1- My Goals

1. Learn to use the Unix command line.

2. Improve my data analysis skills.

3. Gain experience in scientific research.

4. Connect with people interested in astronomy.

5. Get better at programming, especially in Python.

6. Learn how to read and understand scientific papers.

2- My Astronomy Interests

I'm especially interested in exoplanets and astrobiology, because the idea of discovering potentially habitable worlds beyond our solar system is incredibly exciting to me. I'm also fascinated by black holes and dark energy, as they challenge our understanding of physics and the nature of the universe. Additionally, I enjoy following space missions and Mars exploration, as they bring theoretical science into real-life engineering and discovery.
